MODUL 7 PRAKTIKUM STRUKTUR DATA

• Hasil modifikasi versi Linked list

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
// Node
typedef struct node
    char nama[20];
   int alpro;
    int kalkulus;
   struct node *next;
} mhs;
int count = 0;
// Function to Create A New Node
mhs *newmhs(char a[], int alp, int kal)
    mhs *temp = (mhs *)malloc(sizeof(mhs));
    strcpy(temp->nama, a);
    temp->alpro = alp;
    temp->kalkulus = kal;
    temp->next = NULL;
   return temp;
// menghapus pendaftar
void dequeue (mhs **head)
    if ((*head) != NULL)
        mhs *temp = *head;
        (*head) = (*head) -> next;
        free (temp);
    }
```

```
// Function to push according to priority
void enqueue(mhs **head, char n[], int alp, int kal)
   mhs *temp = newmhs(n, alp, kal);
   if ((*head) == NULL)
        (*head) = temp;
   else if (((*head)->alpro < alp) || (alp == (*head)->alpro &&
kal > (*head)->kalkulus))
        temp->next = *head;
        (*head) = temp;
   else
        mhs *start = (*head);
        while (start->next != NULL && start->next->alpro > alp)
           start = start->next;
        }
        if (start->next != NULL)
            while (start->next != NULL && start->next->alpro ==
alp && start->next->kalkulus > kal)
               start = start->next;
        temp->next = start->next;
        start->next = temp;
    if (count >= 5)
        mhs *current = *head;
        while (current->next->next != NULL)
           current = current->next;
        dequeue(&(current->next));
    else
```

```
count++;
void display(mhs *head)
   if (count == 0)
        printf("Belum ada yang daftar\n");
    }
   else
        printf("Daftar urutan dari nilai terbaik:\n");
        for (int i = count; i > 0; i--)
            printf("Nama: %s | Alpro: %d | Kalkulus: %d\n",
head->nama, head->alpro, head->kalkulus);
            head = head->next;
        }
int main()
   mhs *wakil = NULL;
   enqueue(&wakil, "Eko", 50, 20);
   enqueue(&wakil, "Budi", 50, 20);
   enqueue (&wakil, "bambang", 60, 20);
   enqueue(&wakil, "Eka", 60, 20);
   enqueue(&wakil, "wawo", 60, 20);
   enqueue(&wakil, "Ame", 60, 30);
   display(wakil);
   return 0;
```

Output:

```
Daftar urutan dari nilai terbaik:
Nama: Ame | Alpro: 60 | Kalkulus: 30
Nama: bambang | Alpro: 60 | Kalkulus: 20
Nama: wawo | Alpro: 60 | Kalkulus: 20
Nama: Eka | Alpro: 60 | Kalkulus: 20
Nama: Eko | Alpro: 50 | Kalkulus: 20
Process returned 0 (0x0) execution time: 0.093 s
Press any key to continue.
```

• Hasil modifikasi dengan Array

```
#include <stdio.h>
#include <stdlib.h>
#include <string.h>
